Nowadays, more people are working on a freelance basis. For these people, it's important to find ways of dealing with a fluctuating income. A study of fossils from a prehistoric wombat has shed light on the species. According to the study, the species is thought to have been primarily a tree-dweller. Its extremely long forearms and short hind legs suggest it spent its time dangling from trees like modern orangutans. And an analysis of its jawbone and teeth reveals that it consumed foliage rather than meat. The species likely died out as the temperate rainforests that covered its home in Australia gave way to an increasingly dry climate.

When astronomers first began observing planetary systems outside our solar system, gas giants were among the first planets they detected, so they believed that gas giants were the most common type of planet. However, these astronomers could only observe solar systems close to our own, where conditions seem to be particularly conducive to the formation of gas giants. Recently, the Kepler observatory, which is on a mission to search for Earth-like planets in more distant areas of the galaxy, has transmitted data showing that small, rocky planets are actually much more common. Thus, many astronomers now believe that gas giants are less prevalent than once estimated.

One of these is access to fuel. When people spend all their time and money seeking fuel, they cannot use these resources for things with more enduring benefits. Providing people with fuel for cooking, for example, would allow them to focus their time and money on education or business. This would do more in the long run to break the cycle of poverty.

American culture in general appears suspicious of leisure. Some people believe this may be due to the Protestant work ethic. A new French law gave France the shortest work week in Europe. The basking shark is the second largest fish, surpassed only by the whale shark. A grown-up basking shark usually has a length between 8 and 10 meters and weighs about 4 tons. In spite of its size, basking sharks are not aggressive and generally harmless to people. The basking shark has a worldwide distribution and characteristically migrates with the seasons. During the summer, they feed on plankton near the surface in more coastal waters. In the winter months, rather than spending time near the surface, basking sharks spend more time in deep waters. So they are very rarely seen during the winter. The basking shark reproduces slowly. It becomes fertile at the age of four and a pregnancy lasts for about two years, resulting in not more than six "baby-sharks," each measuring about 1.5 meters in length.
